

Process Overview

This is a Process Design Document (PDD) for an automated RPA process involving integration with SAP and Excel systems. The process handles order fulfillment and inventory management.

Process Steps:

1. Extract order data from SAP system using OData API
2. Validate inventory levels against Excel warehouse database
3. Generate picking lists and shipping labels
4. Update order status in SAP with confirmation
5. Archive completed orders in Excel archives

Business Rules

Rule 1: Orders exceeding 50 items must be split into multiple shipments.

Rule 2: Items out of stock must be flagged and escalated to the procurement team within 4 hours of order receipt.

Rule 3: All orders must be processed within 24 hours of receipt unless marked as expedited.
